

All 49 Property Contacts

Every saved property now has a sourced public business phone route, labeled by who it belongs to. These are routes for qualification—not proof of open work, an awarded role, or a purchasing decision-maker.

49	47	2	0	0
property rows researched	confirmed / strong routes	best-guess routes to verify	rows without a suitable number	confirmed open trade packages

Two dates, two meanings: project facts are the saved September 20, 2026 snapshot. Contact routes were checked September 20, 2026. No test calls were made, so publication does not prove a number still connects.

Who the selected numbers reach

- 8 rows route to a permit-listed construction contractor
- 27 rows route to an owner, developer, tenant or institution
- 12 rows route to a designer, engineer or accessibility professional
- 1 row routes to a project representative/design firm
- 1 row routes to an approving-jurisdiction office

Counts describe rows, not unique people or phone numbers. The 49 rows contain 47 distinct selected contact names and 46 distinct selected numbers.

How to use each row

- Start with the large number in “Best public business route.”
- Read the role before calling; designers, engineers, owners, tenants, institutions and routing offices are clearly labeled.
- Use alternatives when the best route cannot answer who manages construction or remaining trade work.

Evidence rules used

- Strong routes use official company, institution, association or government sources with a confirmed entity match.
- Best-guess routes are kept separate and visibly flagged; they must not be counted as confirmed.
- Project links support the saved project. Contact-evidence links support the displayed route; they are not interchangeable.
- Consumer order lines, unrelated stores, fax numbers and private-owner numbers were excluded.

Important limits

- Permit or planning status does not prove work is active or available.
- A public business number is not necessarily a direct project manager.
- Possible fit is a research judgment, not a verified trade package.

Coverage: Brazos: 18; Burleson: 4; Grimes: 3; Leon: 2; Madison: 1; Robertson: 6; Washington: 15.

Original rows 1-13 (13)

Brenham permits and statewide registrations from Citizens National Bank through Hub College Station Phase II. Every row shows the best researched phone route and its actual role.

Completion estimates differ (Nov. 26 / December); builder unknown.

Coverage and unresolved verification

Complete row coverage

- All 49 immutable property IDs appear exactly once.
- 47 rows have a confirmed/strong selected phone route.
- 2 rows use a provisional selected phone route.
- 0 rows end without a suitable public number.
- All original linked sources were given a recorded research disposition in the repository ledger.

Best-guess routes

#05 Brennan Taylor Developments: the phone is a provisional exact-name/location business match; confirm that this Louisiana entity is the permit actor before relying on it.

#33 Valco Builders: the number is directory-sourced and the exact project/company identity is not confirmed. The City permit-routing office is included as an alternative.

Role cautions that matter

- **#04 Atlas:** the saved contractor is for sign/wall scope, not the parking work; the selected route is the church owner/applicant.
- **#12 Barron Suite 204:** builders from other suites were not transferred; the accessibility specialist is a fallback route.
- **#14 Glo:** tenant-funded does not mean landlord-bought; the selected route is the listed designer.
- **#36, #38 and #39:** developer/engineer routes are not appointed builders. Tabor plans remain interim and not for bidding or construction.
- **#42:** Lay is a project representative/design firm, not a confirmed building contractor.
- **#46:** the City of Somerville is an approving-jurisdiction routing office because no safely matched Altura Capital number was established.

Bottom line

This revision completes contact research for the original 49-property snapshot without changing the original property JSON or any earlier PDF. The table is for careful qualification only; no outreach was performed.

Generated from the four validated contact-research batches. Older Masiate PDFs remain separate and unchanged.
